RE: Certification of Firetube Retrofit Kit, Esys Firetube MX-1.0 and Esys Firetube MX-1.5

Dear Mr. Lessley,

The District has received the source test report for Firetube Retrofit Kits rated at 1.0 and 1.5 MMBtu/hr natural gas fired burners and associated control systems for certification with District Rule 4308 conducted on March 15 and 16, 2018. Review of the report indicates that the burners demonstrate compliance with emission limits contained in Rule 4308, Table 2, and has met the testing requirements contained in Section 6.0 Administrative Requirements. The retrofit kits listed are certified for use on fluid backed heaters operating on natural gas as the fuel.

If you have any questions please contact the District at 661-392-5500.

Sincerely

Mike Oldershaw
Manager of Compliance, Southern Region
