## Passive DC signal isolator

without power supply,  
Ex- and non-Ex version, in housing N17 or S17  
for rail and wall mounting

CE 0102  $\text{Ex}$  II (1) G resp. II (2) G

### Application

The signal isolator **SINEAX TI 807** serves to electrically insulate the analogue DC signal in the range 0...20 mA which depending on version is then converted to a current or voltage signal (0...20 mA or 0...10 V). It operates passively and does not require a separate power supply, but derives the little auxiliary energy it needs from the DC signal.

The series of isolators also includes "intrinsically safe" explosion-proof versions with either an intrinsically safe **input** signal [EEx ib] IIC or intrinsically safe **output** signal [EEx ia] IIC. They are thus suitable for use in connection with intrinsically safe equipment installed in the hazardous area.

The signal isolator is supplied in two different housings depending on the number of transmitter channels to be isolated: SINEAX TI 807-5 with **one** transmitter channel to be isolated in housing Type **N17** (Fig. 1) and SINEAX TI 807-1 with **two or three** channels in housing Type **S17** (Fig. 2). Both types of housing are suitable for either rail or wall mounting.

### Features / Benefits

- Electrically insulated analogue DC signals 0...20 mA / Prevents the transfer of interference voltages and currents. Solves grounding problems in meshed signal networks
- Highly accurate / Performs its isolating function with negligible transmission error
- No power supply needed / Saves wiring costs and is easy to install in existing plants
- Available in type of protection "Intrinsic safety" [EEx ib] IIC or [EEx ia] IIC (see "Table 8: Data on explosion protection")
- Snaps onto a DIN rail or screws onto a wall or panel / Adaptable to the circumstances at the place of installation
- Compact and narrow. Housing only 17.5 mm wide / Low space requirement, high packing density. 27 devices fit into a 19" rack

### Layout and mode of operation

The description below refers to SINEAX TI 807-5 with **one** isolation and transmission channel.

The DC signal isolator comprises a DC chopper Z, an isolating stage T, a rectifier G and an oscillator O.

The chopper converts the DC input signal  $E = 0 \dots 20 \text{ mA}$  to an AC signal which is transformed with electrical insulation, rectified, smoothed and appears at the output as a DC **current** signal  $A = 0 \dots 20 \text{ mA}$  (Fig. 3, left). Versions with a DC output **voltage**

Fig. 1. SINEAX TI 807-5 with **one** isolation and transmission channel, in housing **N17**, clipped onto a top-hat rail.

Fig. 2. SINEAX TI 807-1 with **two or three** isolation and transmission channels, in housing **S17**, screw hole mounting brackets pulled out.

signal  $A = 0 \dots 10 \text{ V}$  have a resistive burden of  $500 \Omega$  through which the current flows (Fig. 3, right).

The chopper is controlled by the oscillator which obtains its power from the DC signal.

### Technical data

#### Input signal E $\rightarrow$

DC current signal $I_E$ :	0...20 mA
Max. permissible current:	50 mA
Voltage limiter:	Non-Ex version: 27 V $\pm$ 5% (with zener diode) Ex version: 18 V, $\pm$ 5%

#### Output signal A $\leftarrow$

(DC current or DC voltage)

DC current signal  $I_A$ : 0...20 mA

Voltage drop  $U_V$ :

< 2.6 V	with standard (non-Ex) version
< 4.5 V	with Ex versions (input signal(s) "intrinsically safe")
< 6.1 V	with Ex versions (output signal(s) "intrinsically safe")

Max. burden:

1000 $\Omega$	with standard (non-Ex) version
500 $\Omega$	with Ex versions (input signal(s) "intrinsically safe")
500 $\Omega$	with Ex versions (output signal(s) "intrinsically safe")

Limit: Approx. 40 mA

Residual ripple: < 20 mV ss

Time constant: Approx. 3 ms

### Accuracy data

Error limits:	< $\pm$ 0.1% (Reference value 20 mA of output signal, typical linearity error included)
	< $\pm$ 0.2% (Reference value 10 V of output signal, typical linearity error included)

### Reference conditions

DC current signal $I_E$ :	0...20 mA
Ambient temperature:	23 °C $\pm$ 1 K
Output burden:	250 $\Omega$ (at DC <b>current</b> output signal) $\geq$ 5 M $\Omega$ (at DC <b>voltage</b> output signal)

### Additional error

Burden influence:	< 0.05% / 100 $\Omega$ (at DC <b>current</b> output signal)
Temperature coefficient:	< 50 ppm/K

### Installation data

Mechanical design:	Housing N17 or housing S17 Dimensions see section "Dimensional drawings"
Material of housing:	Lexan 940 (polycarbonate). Flammability Class V-0 acc. to UL 94, self-extinguishing, non-dripping, free of halogen
Mounting:	Snapping onto top-hat rail 35 $\times$ 7.5 or 35 $\times$ 15 mm (acc. to EN 50 022) or directly onto a wall with 2 screws and – adapter (for TI 807-5....) – pull-out screw hole brackets (for TI 807-1....)
Mounting position:	Any
Electrical connections:	Screw terminals with wire guards for light PVC wiring and max. 2 $\times$ 0.75 mm <sup>2</sup> or 1 $\times$ 2.5 mm <sup>2</sup>

<sup>1</sup> This is the time which transpires before the output signal reaches the error limit of 1% for a step change of the input signal from 0  $\rightarrow$  90%.
